

Endobarrier

This study is investigating the effects of a new non-surgical device (EndoBarrier) on Type 2 Diabetes and weight loss over a period of 2years. It is examining whether this new device can help patients manage their blood sugar levels and lose weight without the need for surgery. This study will compare the EndoBarrier device compared to standard medical treatment.

If you have a Body Mass Index (BMI) between 30-50kg/m² and you have type 2 DM then you may be eligible. You can contact 02381208591 / 07917085362
